Evolving Role of Valuation

As a valuer we have witnessed many changes that has occurred in our profession since beginning of this profession. Earlier in 60's, we received a license under wealth tax Act, to practice merely because we had a degree in Architecture or Engineering with minimum 10 years of practice in our respective profession with further inputs in valuation while we grew in our profession. But many of us never had any formal, in depth and focused education in valuation. Most of the earlier Real Estate Valuers were retired engineers from Govt. service and this profession was considered as an add-on profession post retirement. Similarly Valuers for Securities or Financial assets came with only commerce back ground. These things started changing with time as almost all cities and states started exploding with development and required services of far more valuers as an independent practicing professional. Government policies and priorities also changed rapidly putting our nation on global platform compelling valuation professionals to be abreast with knowledge and practice followed all over world. In this situation, Government of India took the first step by creating a body of a Regulator for this profession namely IBBI [Insolvency and Bankruptcy Board of India] who was entrusted with a formal examination of Valuers before issuing License to any Valuer.

Valuation Today

Valuations are required for a number of purposes including the buying and selling of property, development appraisal, monitoring the level of property performance, loan security, tax matters, company accounts and insurance reinstatement. The lack of a central trading market and the opaqueness of the market mean that investors in real estate are not able immediately to obtain a valuation of their asset. Instead, investors rely on independent valuers to provide this service. The purpose of the valuation and the type of property that is to be valued will determine the basis of the valuation and the techniques that should be employed. The main requirement of the major investors is for performance measurement and valuations provide the data for this to be carried out. Information on capital value, Market Rent and the components which have driven performance, such as yield shift and rental growth, provide the level of information needed to analyse the performance of real estate investments over different time periods.

Course Overview

Smt. Manoramabai Mundle College of Architecture, Nagpur, affiliated to Nagpur University is starting 3 courses each in Valuation sanctioned /approved /recognized by Nagpur University having NAAC ranking A, in two disciplines i.e. Valuation of Real Estate and Valuation of Securities or Financial assets with a combination of excellent senior academic faculty and senior professional faculty offering a distinct advantage to the students taking admission to each course. The syllabus is primarily based on IBBI syllabus with few additional subjects to help professionals with distinct subjects such as Valuation for banks as well as Valuation for Capital Gain Tax. In fact this is an umbrella multidisciplinary course providing inputs to students from different disciplines.

Money values do not simply mirror the state of affairs in the real world, valuation is a positive act that makes an impact on the course of events. Monetary and real phenomena are connected in a reflexive fashion that is they influence each other mutually. The reflexive relationship manifests itself most clearly in the use and abuse of credit.
